

Quarterly Field Report — Page 1

This is the first page of the sample PDF used by the auto-embed parser tests. It contains pure ASCII text only, no images or forms, so unpdf should extract the text cleanly across every Node version we support.

Quarterly Field Report — Page 2

The second page exercises page-number metadata: the parser must emit `pageNumber` and `pageCount` fields so that the chunker can stamp them onto downstream chunks. Tests assert that page 2 maps to `pageNumber 2` with `pageCount 3`.

Quarterly Field Report — Page 3

The third and final page closes the report. It should be parsed as its own section, distinct from pages 1 and 2, with metadata indicating that `pageCount` equals 3 and that this section sits at the end of the document.
